TSH Associates was established in 1962, and now employs over 330 people in 11 offices throughout Ontario. Our staff currently consists of landscape architects, professional civil, mechanical, structural and electrical engineers, architects, arborists, biologists, and numerous computer and information technology experts.

TSH is a multi-disciplinary consulting firm that has demonstrated effective project management, design and construction administration skills. Our projects range in size from small urban parks to water pollution control plants and from multi-unit residential projects to toll highways. We have successfully completed a wide range of projects across Canada and internationally.

Our engineering services are provided by an in-house staff, ensuring a high level of design co-ordination and accuracy, rapid and responsive service, as well as single source accountability and responsibility.

While renowned for our engineering, TSH also employs landscape architects, and is recognized as one of Ontario's premier design firms for multi-faceted and complex outdoor landscapes. Our landscape architecture department is highly skilled in the planning and design of landscapes that meet the needs, expectations and requirements of the users while carefully balancing maintenance and operational requirements.

TSH has a proven ability to work with diverse multi-disciplinary teams of engineers, architects, planners, politicians and the public.

Xinyu Culture and Sports Complex, Xinyu

TSH led the master planning and design submission for this new culture and sports centre in the City of Xinyu.

Our park concept integrated passive open space within an extension of the urban street grid. The large stadium and public facilities were concentrated along the major transit arterials, creating a dynamic street address for the spectator venues. The quiet children's parkette and contemplative gardens were adjacent to future residential and city hall precincts, placed within sweeping lawns and forests. Symbolic tributaries of the Kongmu River meander through our park introducing water running, splashing and cascading from buildings, fountains and canals.
